

SAJAL RASTOGI

SENIOR SOFTWARE ENGINEER

sajalrastogi20@gmail.com • +918400840123 • Delhi, India • [linkedin.com/in/sajal-rastogi-5b474b6a](https://www.linkedin.com/in/sajal-rastogi-5b474b6a)

SUMMARY

As a seasoned DevOps professional with 4+ years of experience, I excel in architecting and automating complex software lifecycles, designing scalable AWS cloud infrastructure, and ensuring uninterrupted system uptime at enterprise scale. My expertise spans advanced CI/CD orchestration, infrastructure-as-code implementations, containerization strategies, and adept troubleshooting across distributed systems. Proficient in modern messaging systems, caching layers, code quality automation, and comprehensive observability solutions, I specialize in optimizing third-party integrations to meet strict SLOs. I've achieved 54% cost reduction on RDS databases while maintaining performance. My passion lies in leveraging cutting-edge technologies to drive efficiency and deliver exceptional results.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate

Google Cloud Certified Cloud Digital Leader

EXPERIENCE

Trigyn • Senior Software Engineer

National-scale Digital Document Wallet Platform | May 2025 – Present | India

- Designed and managed AWS ECS-based microservice deployments with auto-scaling, service discovery, and integration with ECR, CloudWatch, and IAM for enhanced observability and governance.
- Configured RabbitMQ messaging infrastructure on EC2, including instance provisioning, security groups, IAM roles, port management (5672, 15672), and queue optimization for reliable asynchronous communication.
- Set up SonarQube on AWS with instance creation, security configuration, port setup (9000), and deep Jenkins integration for automated code quality checks and technical debt tracking.
- Enhanced Jenkins pipelines with advanced pipeline-as-code, multibranch strategies, shared libraries, and end-to-end orchestration with Git, SonarQube, Docker, and ECS.
- Implemented Redis Cluster for high-availability caching with node setup, security configuration, memory optimization, replication across availability zones, and failover handling.
- Managed MongoDB backup strategies with automated scheduling, retention policies, point-in-time recovery, and validation across environments to ensure RTO/RPO compliance.
- Configured AWS CloudWatch for observability including custom metrics, log aggregation, alarm thresholds, dashboards, and SNS notifications across all infrastructure components.

GlobalLogic • Senior Software Engineer

June 2022 – July 2024 | Noida, India

Project: Deployment of Event Booking App

- Orchestrated end-to-end infrastructure provisioning using Terraform, ensuring seamless deployment of Linux-based CentOS 7 EC2 instances and essential AWS services such as VPC, SG, S3, RDS, and Route53.
- Implemented Ansible playbooks for automated configuration management across staging and production servers, facilitating rapid integration of Kubernetes, Docker, and Git.
- Containerized microservices using Docker, optimizing resource utilization and enhancing scalability within microservices architecture.
- Spearheaded the design and execution of CI/CD pipelines via Jenkins, enabling efficient deployment of microservices and ensuring continuous delivery of production-grade code.
- Leveraged Kubernetes to deploy and manage containerized applications, including stateful services requiring database persistence, while ensuring high availability and fault tolerance.

- Integrated Prometheus with custom exporters and Grafana dashboards to monitor containerized workloads and infrastructure performance metrics.
- Implemented centralized logging using the ELK stack (Elasticsearch, Logstash, Kibana), enabling efficient log aggregation, search, and visualization for faster debugging.

Project: Disaster Recovery for Leading Pet-Insurance App in USA

- Championed disaster recovery initiatives, leveraging infrastructure-as-code (IaC) and automation techniques to achieve one-click deployment for live environments.
- Harnessing AWS CDK (Python), orchestrated CloudFormation stacks to provision essential AWS services like EKS, EFS, SNS, SES, RDS, and DocumentDB, streamlining deployment and management processes.
- Implemented Helm Charts for seamless installation of critical Kubernetes components within EKS clusters, enhancing observability and scalability through Istio, Metrics-server, ALB Ingress Controller, and Datadog Agent Daemonset with custom Health API metrics.
- Designed Python scripting solutions to automate deployment processes, integrating boto3 SDK for custom functionalities and enhanced orchestration capabilities.
- Managed secrets and parameters securely using AWS Systems Manager and Kubernetes manifests, ensuring robust security practices and compliance standards.

Project: Optimizing Integrations for Leading CCAAS Providers in USA

- Established comprehensive monitoring and alerting mechanisms using Datadog and CloudWatch to proactively identify and resolve infrastructure issues while maintaining optimal performance and reliability.
- Configured AWS CloudWatch Logs and Metrics for Lambda functions to monitor execution behavior, detect anomalies, and streamline troubleshooting efforts.
- Proficiently utilized Azure DevOps tools for streamlined artifact builds and deployments, integrating seamlessly with CI/CD pipelines and agile development methodologies.
- Collaborated effectively within Agile frameworks, utilizing Atlassian Jira and Azure DevOps Boards for efficient task management and tracking, ensuring alignment with project objectives.
- Managed version control and resolved merge conflicts efficiently using Bitbucket and Azure DevOps Repos, fostering collaborative development within distributed teams.

Wipro • Project Engineer

Project: Ratings and Review Services for an E-Commerce Website | July 2019 – September 2020 | Bangalore, India

- Worked in agile framework, collaborating with business and research teams in story grooming, reviewing story/acceptance criteria and performance metrics.
- Spearheaded the development of microservices architecture utilizing Java, REST APIs, and Spring Boot, optimizing performance and scalability for critical ecommerce services.
- Containerized microservices using Docker, facilitating seamless deployment on AWS infrastructure, and ensuring robust reliability and scalability.
- Automated CI/CD processes utilizing Jenkins, streamlining development workflows and enhancing deployment efficiency.

SKILLS & TOOLS

Operating Systems

Red Hat Linux, CentOS, Ubuntu, Debian, Windows

Programming Languages

Java, Python, YAML

Database Deployments

SQL Server, MySQL, MongoDB Atlas, PostgreSQL, MongoDB (backup automation, recovery validation)

Monitoring/Logging Tools

Datadog, CloudWatch, Prometheus, Grafana, ELK, Elasticsearch, Kibana, Uptime Kuma

Repository/Artifactory Manager

Azure Artifacts

Web/Application Servers

Apache HTTP Server, Nginx, Tomcat

Container Management Tool

Docker, Kubernetes, ECS, ECR

Build and Dependency Management Tools

Maven, Gradle, NPM, Poetry, PIP

Source Code Management System

Git, GitHub, GitLab, Azure Repos, Bitbucket

Bug Reporting & Issue Tracking

Atlassian-JIRA, Azure Boards

Messaging & Caching Architecture

RabbitMQ, Redis Cluster, SQS

Cloud Platforms

AWS: EC2, S3, ELB, EBS, IAM, SG, ASG, VPC, CLI, Cost Explorer, CloudFormation, CloudFront, Route53, EFS, SNS, SES, CloudWatch, Secrets Manager, System Manager, Cognito, API-Gateway, RDS, EKS, ECS, ECR, DocumentDB, Lambda, Event Bridge, Athena, WAF • GCP: Compute Engine, App Engine, IAM, Cloud Storage

Scripting Languages

Bash, Shell, Python

CI/CD Tools

Jenkins, SonarQube, Azure DevOps Pipelines

Configuration Management Tool

Ansible

Infrastructure as a Code Tool

Terraform, AWS CDK, AWS CloudFormation, AWS Serverless Framework, Boto3

EDUCATION**Post Graduate Diploma in Artificial Intelligence and Machine Learning**

NIT Warangal • July 2022 – June 2023 • India

Bachelor of Technology, Computer Science (First Class)

Galgotias University • September 2015 – May 2019 • Greater Noida, India
